Helping you develop and deploy software solutions to meet your business needs.

**Highlights**

- **Leverage infrastructure services to help you with installation, configuration, system security, scalability and availability**

- **Take advantage of comprehensive migration services, including skills enablement and application conversion, designed to minimize your risk**

- **Implement your software solution faster— and help ensure that it is ready to deploy when the development stage is complete**

Your company has invested in IBM WebSphere® software to run critical business processes. Now, you need to maximize the return on your investment by helping it integrate seamlessly with your existing IT assets. Providing your IT staff with specialized training can help minimize disruption to your daily operations — and help ensure your project’s success.

IBM Software Services for WebSphere can help you develop and deploy your WebSphere software solution. Leverage IBM Software Services for WebSphere infrastructure services to help you install and configure software, and to address issues such as system administration, security, scalability and availability. Take advantage of IBM Software Services for WebSphere deep, technical skills to migrate smoothly from legacy environments to a WebSphere solution. And gain the training and advice you need to achieve your infrastructure-performance objectives.

**Migrate existing software solutions efficiently**

Migrating to a new software environment can be essential to achieving your business objectives — but understanding the risk is equally important. Managing your migration project poorly can affect your ability to deliver your products and services to customers on schedule, which can impact your bottom line. IBM Software Services for WebSphere experts can help reduce your risk by developing a migration strategy and an implementation plan that minimize disruption and deliver proven results. Learn how to best exploit the functions of your new WebSphere software environment. Gain a clear understanding of the design options available for your network, operating system, hardware and subsystems. And receive expert guidance to help you implement a resilient infrastructure to support your business requirements.
As a result, you can quickly master the complexities of software migration and enjoy the benefits of a robust, scalable solution based on WebSphere technology.

**Implement a successful software solution**

Often, the difference between a successful and an unsuccessful software implementation lies in correctly understanding your needs and developing a plan accordingly. IBM Software Services for WebSphere consultants have the proven experience to provide the requisite knowledge transfer to your staff. IBM Software Services for WebSphere experts can provide an overview of your WebSphere software solution, so your developers can use the solution’s key features and functions. Consultants can help your developers evaluate existing infrastructure assets and map core requirements to your WebSphere software solution to help you meet important business objectives. As part of the solution implementation, IBM experts also help install your WebSphere solution in a test environment, conduct any necessary verification tests and develop applications for the production environment to further help ensure a successful solution implementation.

**Prepare to deploy WebSphere software in your existing environment**

IBM Software Services for WebSphere can provide you with hands-on support and skill-transfer activities to help you successfully deploy your new WebSphere software solution. An IBM Software Services for WebSphere deployment-readiness engagement can help you:

- Prepare for the deployment of applications in the new production environment.
- Verify the WebSphere production environment, including placement of Web servers, application servers and firewalls.
- Verify WebSphere performance and security requirements.
- Evaluate your infrastructure’s scalability and high-availability functionality.

Let IBM Software Services for WebSphere experts empower your development team to use WebSphere software effectively so your team can build the sophisticated solutions that your business requires. And you can begin to reap the benefits of being an on demand business.

**A sound investment**

You need the right skills and experience to build on demand business solutions. As part of this process, you must leverage your most valuable asset—your people. IBM Software Services for WebSphere has a proven approach to help identify your staff’s on demand business services and support needs. By combining the intellectual capital of your people with the critical technical skills from IBM Software Services for WebSphere consultants, you can create a team that understands the complexities of the technology that runs your business.

IBM Software Services for WebSphere consultants can help you identify skill gaps and recommend the right training—from classroom-based learning and hands-on custom workshops to self-study courses, skills transfer and mentoring. Whatever your needs, you can rely on the deep technical skills of the IBM Software Services for WebSphere team to help you succeed.
