

# Enigma Data Systems

**Company overview:** Enigma Data Solutions is a leading provider of data management software worldwide. Enigma's products and solutions address today's data storage demands enabling businesses to compete more effectively by preserving strategic data and reducing the total cost of ownership.

**Web site:** [www.enigmadata.com](http://www.enigmadata.com)

**Core competency:** Application-Aware Project Archiving

**Product name:** **PARS (Project Archive and Retrieval System)**

## Operating environments supported

AIX®	Linux®	OS/400®	OS/390®	Microsoft® Windows®	Sun® Solaris®	HP-UX®	Novell® Netware®
	Redhat			Windows XP Windows 2003 Windows 2000 Windows NT	x		

**Product description:** PARS has a unique approach to the capture of important information for backup, long term archiving for compliance and corporate governance.

PARS is designed to capture information from multiple information sources including applications, databases, ad-hoc file/directory structures wherever they reside in your organization. This information is pulled together to be stored, securely and centrally.

The value of this information is greatly enhanced by the simultaneous capture of associated MetaData. This not only enables accurate archive searches but can also provide enough information to negate the need to restore any bulk data.

PARS has configurable free-text, manual and automatic MetaData collection methods. Descriptions for each archive can be captured with pre-loaded standard lookups to enable accurate future searches. Automatic methods decrease the possibility of user input errors and inconsistency.

As part of the archiving process, PARS can set the retention level based upon business requirements that are aligned to federal regulations such as Sarbanes-Oxley, HIPAA, GLB and others.

**Supported geos:** Americas, Europe, Middle East, Africa, Asia Pacific

**Supported region:** Worldwide

**Headquarters location:** WW East Sussex UK, Sales Houston, Texas USA

**Compelling differentiation:** PARS is the only product today that has the ability to capture information from multiple information sources including applications, databases, ad-hoc file/directory structures wherever they reside in your organization. It then offers the unique capability to compile and archive this data as a “project”.
